

Branch Naming

Format:

```
<type>/<branch-name>
```

Allowed Types:

```
feat      → new feature
fix       → bug fix
docs      → documentation only
chore     → tooling, config, cleanup
refactor  → code restructure, no behavior change
```

Examples:

```
feat/patient-consent-flow
feat/rbac-permissions
fix/login-refresh-token
docs/git-workflow
chore/update-env-example
refactor/auth-module
```

Rules:

- Use Kebab-Case.
- No spaces.
- One purpose per branch.
- No vague names (`feat/update` , `fix/stuff`)

Commit Messages

Format:

```
<type>: <short imperative description>
```

Allowed Types:

```
feat  
fix  
docs  
chore  
refactor  
test
```

Examples:

```
feat: add patient consent model  
fix: prevent unauthorized record access  
docs: add backend architecture diagram  
chore: update git workflow documentation  
refactor: simplify auth guard logic
```

Rules:

- Present tense (example: "add" not "added").
- Commit often.
- One logical change per commit
